

15
CLAIMS

What is claimed is:

1. A method of configuring a hard copy output engine comprising:
downloading data including a configuration plug-in and configuration data
each including user-specified information; and
configuring the hard copy output engine using the downloaded data.
2. The method of claim 1, wherein the configuration plug-in and
configuration data include data prepared by:
determining a make and model for the hard copy output engine; and
determining user thresholds for consumables associated with the hard
copy output engine.
3. The method of claim 1, wherein downloading includes:
sending an electronic message via the Internet to a website for a vendor
associated with the hard copy output engine; and
receiving an electronic message via the Internet in response to sending.
4. The method of claim 1, wherein downloading includes:
sending an electronic message via the Internet to a vendor associated with
the hard copy output engine; and
receiving an electronic message via the Internet in response to sending,
wherein sending and receiving include transmission across a firewall.
5. The method of claim 1, wherein configuring includes setting a
threshold for an element chosen from a group consisting of: pigmentation material,
marking material, number of hours of operation and number of sheets of print media
consumed.
6. The method of claim 1, wherein the hard copy output engine is
chosen from a group consisting of: facsimile machines, photocopiers and printers.

7. The method of claim 1, wherein the configuration plug-in and configuration data include data prepared by:

- determining a make and model for the hard copy output engine;
- determining a serial number for the hard copy output engine; and
- determining user thresholds for consumables associated with the hard copy output engine.

8. An article of manufacture comprising a computer usable medium having computer readable code embodied therein that is configured to cause a processor to:

- download data including a configuration plug-in and configuration data each including user-specified information; and
- configure a hard copy output engine using the downloaded data.

9. The article of manufacture of claim 8, wherein the computer readable code configured to cause the processor to configure the hard copy output engine includes computer readable code configured to cause the processor to:

- determine a make and model for the hard copy output engine; and
- determine user thresholds for consumables associated with the hard copy output engine.

10. The article of manufacture of claim 8, wherein the computer readable code configured to cause the processor to download data includes computer readable code configured to cause the processor to:

- send a first electronic message across a firewall via the Internet to a website for a vendor associated with the hard copy output engine; and
- receive a second electronic message across the firewall via the Internet in response to the first electronic message.

09976630-10101

11. The article of manufacture of claim 8, wherein the computer readable code configured to cause the processor to download data includes computer readable code configured to cause the processor to:

send a first electronic message across a firewall via the Internet to a website for a vendor associated with the hard copy output engine; and
receive a second electronic message across a firewall via the Internet in response to the first electronic message.

12. The article of manufacture of claim 8, wherein the computer readable code configured to cause the processor to configure the hard copy output engine includes computer readable code configured to cause the processor to configure the hard copy output engine using the downloaded data to set a threshold for an element chosen from a group consisting of: pigmentation material, marking material, number of hours of operation and number of sheets of print media consumed.

13. The article of manufacture of claim 8, wherein the computer readable code configured to cause the processor to configure the hard copy output engine includes computer readable code configured to cause the processor to configure a hard copy output engine chosen from a group consisting of: facsimile machines, photocopiers and printers.

14. The article of manufacture of claim 8, wherein the computer readable code configured to cause the processor to configure the hard copy output engine includes computer readable code configured to cause the processor to:
determine a make and model for the hard copy output engine;
determine a serial number for the hard copy output engine; and
determine user thresholds for consumables associated with the hard copy output engine.

15. A computer implemented control system for a hard copy output engine, the system comprising:

- memory configured to store a software module; and
- processing circuitry configured to employ the software module to:
 - download data including a configuration plug-in and
 - configuration data each including user-specified information; and
 - configure a hard copy output engine using the downloaded data.

16. The computer implemented control system of claim 15, wherein the processing circuitry configured to employ the software module further comprises processing circuitry configured to employ the software module to:

- determine a make and model for the hard copy output engine; and
- determine user thresholds for consumables associated with the hard copy output engine.

17. The computer implemented control system of claim 15, wherein the processing circuitry configured to employ the software module to configure includes processing circuitry configured to employ the software module to configure the hard copy output engine using the downloaded data to set a threshold for an element chosen from a group consisting of: pigmentation material, marking material, number of hours of operation and number of sheets of print media consumed.

18. The computer implemented control system of claim 15, wherein the processing circuitry configured to employ the software module further includes processing circuitry configured to employ the software module to:

- send a first electronic message across a firewall via the Internet to a vendor associated with the hard copy output engine; and
- receive a second electronic message across the firewall via the Internet in response to the first electronic message.

19. The computer implemented control system of claim 15, wherein the hard copy output engine is chosen from a group consisting of: facsimile machines, photocopiers and printers.

20. The computer implemented control system of claim 15, wherein the processing circuitry configured to employ the software module further comprises processing circuitry configured to employ the software module to:

- determine a make and model for the hard copy output engine;
- determine a serial number for the hard copy output engine; and
- determine user thresholds for consumables associated with the hard copy output engine.

21. A computer instruction signal embodied in a carrier wave carrying instructions that when executed by a processor cause the processor to:

- download data including a configuration plug-in and configuration data each including user-specified information; and
- configure a hard copy output engine using the downloaded data.

22. The computer instruction signal of claim 21, wherein the computer instruction signal embodied in the carrier wave carrying instructions that cause the processor to configure the hard copy output engine includes a computer instruction signal carrying instructions that when executed cause the processor to:

- determine a make and model for the hard copy output engine; and
- determine user thresholds for consumables associated with the hard copy output engine.

23. The computer instruction signal of claim 21, wherein the computer instruction signal embodied in the carrier wave carrying instructions that cause the processor to download data includes a computer instruction signal carrying instructions that cause the processor to:

- send a first electronic message across a firewall via the Internet to a website for a vendor associated with the hard copy output engine; and
- receive a second electronic message across the firewall via the Internet in response to the first electronic message.

09976630-101101

24. The computer instruction signal of claim 21, wherein the computer instruction signal embodied in the carrier wave carrying instructions that cause the processor to download data includes a computer instruction signal carrying instructions that when executed cause the processor to:

send a first electronic message across a firewall via the Internet to a website for a vendor associated with the hard copy output engine; and

receive a second electronic message across a firewall via the Internet in response to the first electronic message.

25. The computer instruction signal of claim 21, wherein the computer instruction signal embodied in the carrier wave carrying instructions that cause the processor to configure the hard copy output engine includes a computer instruction signal carrying instructions that when executed cause the processor to configure the hard copy output engine using the downloaded data to set a threshold for an element chosen from a group consisting of: pigmentation material, marking material, number of hours of operation and number of sheets of print media consumed.

26. The computer instruction signal of claim 21, wherein the computer instruction signal embodied in the carrier wave carrying instructions that cause the processor to configure the hard copy output engine includes a computer instruction signal carrying instructions that when executed cause the processor to configure a hard copy output engine chosen from a group consisting of: facsimile machines, photocopiers and printers.

27. The computer instruction signal of claim 21, wherein the computer instruction signal embodied in the carrier wave carrying instructions that cause the processor to configure the hard copy output engine includes a computer instruction signal carrying instructions that when executed cause the processor to:

determine a make and model for the hard copy output engine;

determine a serial number for the hard copy output engine; and

determine user thresholds for consumables associated with the hard copy output engine.
